

6 Advantages of **VERTICAL INTEGRATION**

Shrink your supply chain
and boost production and revenue
with support from a fiber solutions partner
throughout the manufacturing process.

Want to simplify operations, optimize growth, and better meet
market demand? Work with a vertically integrated provider.

A manufacturer equipped for end-to-end support – from sourcing
materials to fiber and nonwoven production – can save you time
and money while helping to minimize your environmental impact.

Here are six key ways that a vertically integrated fiber solutions provider benefits your business and the environment.

1) Simplified Sourcing

Tap into a readily available source of raw materials, often recycled, ranging from natural and synthetic fibers to textile byproducts. Or recycle and repurpose your own post-production materials for a second life as high-quality fiber or nonwoven products.

2) Cost Savings

Choose a fiber processor with existing inventory – or equipped to use your own textile waste – to save on material costs. Even better, find a provider that also produces high-quality fiber and nonwoven products on site to reduce freight expenses and lead time.

3) Sustainability

Vertical integration helps you lower your carbon footprint, reduce waste, and give your post-production materials a second life. If sustainability is a key goal, leverage a solutions provider committed to recycled materials and streamlined processes to produce fiber products for your business.

4) Innovation

Use one manufacturer for your textile products and benefit from customization processes built to optimize your production and revenue. Get fiber analysis, testing, and evaluation crafted to your facilities and designed to drive value.

5) Competitive Advantages

Enjoy faster time to market with one partner to source textiles – even blended fabrics – and process them into quality fiber and nonwoven products. Plus, get higher-quality fiber solutions when you choose a vertically integrated partner that oversees every step of production.

6) Assured Supply

Never worry about supply shortages when you have a vendor that offers sourced materials and processing capacity in one place. Confidently scale up production and know that your preferred or proprietary fibers or nonwovens are always in stock.

Go Vertical for Profits and the Planet

Turn to a partner equipped to meet your project goals with optimized, sustainable solutions. Let's talk about how Leigh Fibers can benefit your business and the environment.
